

Euro-Roller®

Exhaust extraction
guarantee for clean air

Euro-Roller® exhaust extraction hose reel

Euro-Roller® vehicle exhaust extraction hose reels are available either spring or electrically operated. Hose diameters from 50 to 300 mm are available in the standard program. Euro-Roller® hose reels can be delivered with hose up to 35 mtr.

Euro-Roller® hose reels are available with remote or direct mount fan. Our hose reels are engineered to fit standard or custom designed systems and will provide maximum airflow for complete extraction of all tail pipe exhaust gases.

Euro-Roller® hose reels are well engineered and built to last for years, requiring only minimum maintenance.

Euro-Rail exhaust extraction channel

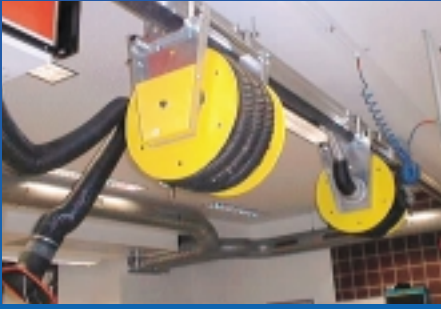

For more than ten years, the Euro-Rail aluminum extraction channel has been proven to be superior to other systems.

The extruded channel has a unique shape that simplifies installation. The hose trolley is mounted outside the rail and provides for excellent airflow. The trolley has sealed ball bearing wheels, providing ease of use and minimal maintenance for many years.

Euro-Roller® for any purpose

Euro-Roller® has the right solution for every type of exhaust system. Our equipment will handle temperatures in excess of 650°. We can also provide spring or electrical operated reels with our rail system, thereby providing the right equipment for any type of design requirement.

Euro-Roller® for emergency vehicles

For exhaust extraction from emergency vehicles, we have an automatic disconnect. The hose stays attached to the vehicle tail pipe, then automatically disconnects at the door when vehicle exits the building. We offer the Euro-Track with electromagnetic disconnect nozzles and the Euro-Air-Track with pneumatic disconnect nozzle. We also offer simple mechanical nozzles for vehicles with overhead tailpipes.

Euro-Roller® exhaust nozzles

For the vehicle exhaust system to work efficiently, the equipment design, fan performance and correct nozzle size are all important.

We can design the right size nozzle for every size tail pipe, with options of pneumatic, mechanical or magnetic clamping. Optional dampers are available.

Euro-Roller® a complete program

If you need welding smoke extraction equipment, Euro-Roller® can supply you with a simple portable unit up to a complete rail system with remote control fan switch.

If source capture is not possible, Euro-Roller® exhaust gas filter units are a good option.
